ABSTRACT

These 89 tables present total employment in Ohio (civilian and military) and in each of its 88 counties from 1940 to 1970 as tabulated by the Bureau of Census. Each table indicates the number employed and the percent of the total employed for 1940, 1950, 1960, and 1970 in the following industries: Agriculture, forestry, and fisheries; mining; contract construction; manufacturing; transportation and utilities; wholesale and trade; finance, insurance, and real estate; services; public administration; and armed forces. In Ohio as a whole, total employment increased 30.8% from 1940 to 1950, 14.8% from 1950-1960, and 17.1% from 1960 to 1970, an overall gain of 75.9% from 1940 to 1970. Six industries showed absolute decline: Agriculture, mining, textile mill products, apparel, railroad transportation, and private households. Agriculture, forestry, and fisheries; mining; contract construction; manufacturing; and transportation and utilities declined in their relative shares of total employment from 1950, while the remaining sectors increased their relative shares. PREFACE

The 89 tables in Employment by Industry in Ohio Counties, 1940 to 1970 present total employment (civilian plus military) in Ohio and in each of its 88 counties, as tabulated by the Bureau of the Census, U.S. Department of Commerce. Civilian employment is distributed by industry. Each industry's share of total employment has been calculated for each decennial Census. These tables offer a basis for assessment of statewide and county patterns of growth and decline by industry, both in absolute and in relative figures.

In Ohio as a whole, total employment increased 30.8 percent from 1940 to 1950; 14.8 percent from 1950 to 1960; and 17.1 percent from 1960 to 1970. Thus there was an overall gain of 75.9 percent from 1940 to 1970. Six industries, however, showed absolute declines from 1940 to 1970--agriculture and agricultural services; mining; textile mill products; apparel and other textile products; railroad transportation; and private households. Two industries for which 1940 data were not available (petroleum and coal products, and primary metals) decreased from 1950 to 1970. The Ohio table also indicates that the goods-producing sectors (agriculture, forestry, and fisheries; mining; contract construction; and manufacturing), as well as transportation and utilities, declined in their relative shares of total employment from 1950 to 1970 (but not from 1940, in the case of construction and manufacturing). The remaining sectors--wholesale and retail trade; finance, insurance, and real estate; services; public administration; and the armed forces--increased their relative shares since 1950.

Absolute employment figures were taken from Regional Employment by Industry, 1940 - 1970, published in 1975 by the Bureau of Economic Analysis of the U.S. Department of Commerce.

The data in this volume pertain to employed persons 14 years of age and older--the age limit used in the 1940, 1950, and 1960 Censuses. Although employment by industry was reported in the 1970 Census for persons 16 years of age and older, relevant questions were asked at the time regarding persons 14 and over so that the Bureau of Economic Analysis was able to obtain a special tabulation of 1970 Census data showing industry of employment for persons 14 years of age and older, comparable to the earlier Census counts.

The statistics herein differ in several respects from other employment data by industry, metropolitan area, and county published by the Division of Research and Statistics of the Ohio Bureau of Employment Services (OBES). Data on nonagricultural wage and salary employment, and employment covered under the Ohio Unemployment Compensation Law, were derived from employer reports in which a person is counted by place of employment and not by place of residence. If he had two or more jobs, he was counted separately for each. In contrast, this volume, which stems from Census tabulations, counts each employed person only once, by county of residence.

In addition, Census statistics count as employed not only persons at work during the reference week but also those with jobs who were temporarily absent due to illness, bad weather, industrial dispute, vacation, or personal reasons. Employer reports, however, include such absentees only if they were paid. The Census counts include self-employed workers and those unpaid family members who worked at least 15 hours for a family business or farm as well as wage and salary employees, agricultural as well as nonagricultural workers, and military personnel on active duty as well as civilians. Members of the armed forces are counted by the Census by place of residence during service, rather than their permanent address, if different. College students and institutionalized persons are tallied similarly.

Industrial classification in this volume is based on Census concepts, which have differed somewhat from one Census to another. The Bureau of Economic Analysis met this problem by combining industries and by transferring a few of the smaller ones from one group to another for the 1940 or 1950 Census. Several manufacturing industries were listed individually for 1950, 1960, and 1970, even though it was necessary to combine them for 1940. The individual industries affected are marked "INA" (information not available) for that Census.

Census classification concepts also differ from the Standard Industrial Classification (SIC), established by the U.S. Office of Management and Budget and used in OBES releases. The principal difference lies in the treatment of government employees: In the 1967 SIC government is a distinct industrial division. The Census classification of "Public administration" is limited, however, to the Postal Service and regular governmental functions at the federal, state, and local levels. It does not include publicly operated schools, colleges, hospitals, homes, utilities, liquor stores, or other activities commonly carried on by private enterprise. In the Census data, government workers in these activities are counted in the same industries as private workers in similar pursuits.

"Lumber, wood products, and furniture" is a combination of two major groups--lumber and wood products and furniture and fixtures. On the other hand, the major group "transportation equipment" is split into "motor vehicles and equipment" and "other transportation equipment."

"Other manufacturing" includes ordnance; tobacco manufactures; rubber and plastics products; leather and leather products; stone, clay, and glass products; instruments and related products; and miscellaneous manufacturing.

"Other transportation" includes local and interurban passenger transit, water transportation, transportation by air, pipe line transportation, and transportation services.

"Other retail trade" includes building materials and farm equipment, retail general merchandise, automotive dealers and service stations, apparel and accessory stores, furniture and home furnishings stores, and miscellaneous retail stores.

"Lodging places and personal services" combines hotels and other lodging places with personal services.

"Business and repair services" combines miscellaneous business services; auto repair, auto services, and garages; and miscellaneous repair services.

"Entertainment and recreation services" combines motion pictures with amusements and recreation services, not elsewhere classified.

"Professional services" includes medical and other health services, legal services, educational services, museums and botanical and zoological gardens, nonprofit membership organizations, and miscellaneous services.

In the Census enumerations, industry of employment was not reported for some of the workers counted. The proportion of such workers in Ohio was 1.4 percent in 1940 and 1950; 3.7 percent in 1960; and 5.4 percent in 1970. These workers were allocated by the Bureau of Economic Analysis among civilian industries according to the distribution of persons with similar characteristics (sex, age, farm or nonfarm residence, education, and weeks worked).

Permission to reproduce all or parts of this compilation is granted, provided due credit is given to the U.S. Department of Commerce and to the Division of Research and Statistics, Ohio Bureau of Employment Services, Columbus, which computed the percentages and produced this volume.

CIVILIAN EMPLOYMENT BY INDUSTRY AND ARMED FORCES IN OHIO, 1940 TO 1970 [A]
